PROCESSES AND PROPERTIES INDEX

N.S.

The principle of the large-block structure of proteins.
 M. A. Lisitsyn and N. S. Aleksandrovskaya. *Compt. rend. acad. sci. U.R.S.S.* 86, 277 (1957); *Chem. Zentr.* 1947, II, 904; cf. C.A. 37, 4742a.—A study was made of the possibility of converting casein into paracasein by using ordinary hydrolytic catalysts without the aid of enzyme action. The formation of lactoprotein, which is found in the filtrate from the paracasein ppt., and is sol. in alc., was taken as a criterion of the conversion into para-casein. The expts. showed that casein was partially hydrolyzed even upon soln., since it split off an alc.-sol. component and was converted into paracasein. Natural casein also contains substances of a lipid character and polysaccharides, which are likewise sol. in alc. The mol. of natural casein, whose mol. wt. has been detd. as 54,000, cannot, therefore, consist of a chain of $2^4 \times 3^4 = 432$ aminocid esters, but rather is built up of larger protein blocks, which are bound together by substances of non-protein character.

Title : Degeneration and Regeneration of Peripheral Nervous in Double Injury.

orig Pub : Tr. Mosk. vet. akad., 1956, 10, 174-188

Abstract : From a rabbit's sciatic nerve a 5 mm piece of nerve was removed subepineurally. In one group of animals a similar trauma was performed simultaneously 1 cm more distal than the first. In a second group, the second trauma was performed 25-30 days after the first. In a third series, the second piece was cut 15-30 days later 1 cm more proximal than the first injured sector. In a double simultaneous nervous

The nature of the photoperiodic after-effect (induction) and the effect of the length of day on the activity of the oxidizing enzymes. M. Kh. Chalakhyan and V. A. Aleksandrovskaya. *Compt. rend. acad. sci. U.R.S.S.* N. 2, 1974 (in English 104-6)(1985). Only short-day induction is possible for short-day plants (millet). Long-day induction exists only for long-day plants (barley). Induction is observed when the causative factor accelerates the fruiting processes and development of the organism. The activity of peroxidase (P) in millet is higher under normal (long) day conditions. In barley the activity of P is higher under short-day conditions. Six day exposure of millet to changed length of day modified the activity of P in the direction in which the given photoperiod acts. There is a correlation between P of leaves and growth intensity in millet, barley, soybeans, *Phaseolus* and tomatoes. P is higher in the leaves of soybeans and *Phaseolus* under short-day conditions. No P was detectable in tomato leaves. The intensity of oxidizing enzymes changes under the influence of photoperiod action differently in plants of differing chem. constitution. The activity of catalase in leaves of plants of different light regimes was approx. the same throughout the observation. Philip D. Adams

Title : Effect of nitrogen and phosphorus on the hydrolysis of starch in sprouting grains of wheat.

Periodical : Dokl. AN SSSR, 95, 6, 1333 - 1336, 21 Apr 54

Abstract : The article describes the experimental study of phosphorus and nitrogen effects on the hydrolysis of starch in wheat grains. There are five tables compiled from these experiments. The first one shows the effect of phosphorus and nitrogen on the hydrolysis of wheat grains before they germinate. The second table shows the effect of the elements mentioned on the activity of a peroxidase in wheat sprouts. The third table shows the effect of the same elements (P & N) on the hydrolysis of starch in wheat grains when the assimilative surface appears. The fourth table shows the effect of phosphorus and nitrogen on activity of a peroxidase and absorption of oxygen by wheat grains after their germination. The fifth table shows effect of phosphorus and nitrogen on the weight of 100 plants on the fourth day after the wheat grains had germinated.

TITLE: ³Valve with a hydraulic or pneumatic piston drive. Class 47, No. 184084
[announced by the Special Design Office of the Baltic Boiler Building Factory im.
Sergo Ordzhonikidze (Spetsial'noye konstruktorskoye byuro kotlostroyeniya Baltiyskogo
zavoda)]

SOURCE: Izobret prom obraz tov zn, no. 14, 1966, 128-129

TOPIC TAGS: valve, hydraulic piston drive, pneumatic piston drive, hydraulic device,
pneumatic device, piston engine

ABSTRACT: The proposed valve with a hydraulic or pneumatic piston drive is designed
for opening and closing the through flow-section of main and auxiliary pipings. In
order to synchronize the opening and closing of both pipings, its control piston is
provided with an annular groove, which, in the open valve position, connects the

TITLE: The Painting of Work Parts in a High-Voltage Field
(Okraska izdeliy v pole vysokogo napryazheniya)

PERIODICAL: Mashinostroitel', 1959, Nr 3, pp 18 - 20 (USSR)

ABSTRACT: The article contains general information on the process and equipment for painting metal work with electrically-charged pulverized paint in a high-voltage electric field, the process parameters established, and the equipment used by the Khar'kovskiy traktornyy zavod, the "KhTZ" (Khar'kov Tractor Plant). The paint-pulverizer is described and illustrated (Figure 1), as well as the paint-feed installation (Figure 2). The failures of other plants are explained by its undue complexity of their equipment. The simple KhTZ paint-feed system, wherein the paint is fed by gravity, and the simplified electrostatic pulverizer, have proved sa-

TITLE: Measurement of the bearings of KhTGZ im. S.M. Kirova turbine

SOURCE: Energomashinostroyeniye, no. 9, 1965, 21-23

TOPIC TAGS: resistance thermometer, temperature measurement, turbine, temperature instrument

ABSTRACT: The increase in turbogenerator power and the introduction of remote control of units from a central panel made it necessary to have accurate remote measurement of the temperature of bearing babbitts. For the purpose, according to the technical specifications of KhTGZ im. S.M. Kirov turbine bearings, L'vov "Termopribor" design bureau (L'vovskoye Konstruktorskoye Byuro "Termopribor") developed the TSP-309 resistance thermometer in 1959. The device, produced by the enterprise of L'vov SNKh, satisfies the 665-59 GOST¹⁰ standards.¹¹ It is a vibration resistant surface device; calibration 21, accuracy class II; it shows low inertia within the 0 – 120° measuring range; and has a two-wire elastic cable with oil resistant insulation. The thermometer operates in conjunction with the 24-point automatic AST-1 panel instrument and the SPKT-1¹² signal device.¹³ The basic measuring error is ±0.5% of the upper limit of measurement. The basic signalization error is ±1%. The point signalization cycle is 1.56 sec. The device is presently in use at the pumps of the Sumy factory. Orig. art. has: 2 formulas and 4 figures.

TITLE: A ferrite-transistor reversible counter

PERIODICAL: Avtomatika i telemekhanika, v. 23, no. 8, 1962,
1112 - 1115

TEXT: A binary ferrite-transistor counter is described which is used in multi-channel automatic-search systems. The counter has great reliability and simplicity. Its main element is a ferrite-transistor flip-flop (shown schematically in a figure). The flip-flop differs from the ordinary ferrite-transistor circuit by the presence of the diode D and of the resistor R in the base-circuit. A second diode is connected in parallel with R. Such a flip-flop, incorporating 2 diodes, is more stable in operation than the one-diode flip-flop, described by H.R. Irons (Ref. 5: A Transistor-Magnetic Core Binary Counter. Proc. I.R.E., v. 46, no. 12, 1958). The operation of addition

TITLE: Compensating the Frequency Detuning of AC Correcting Filter-Sections
(Kompensatsiya chastotnoy rasstroyki korrektiruyushchikh zven'yev na peremennom toke)

PERIODICAL: Tr. Mosk. energ. in-ta, 1956, Vol 18, pp 195-210

ABSTRACT: The effect of frequency fluctuations and supply voltage wave-shape distortions on the operation of a double T-circuit is considered. It is pointed out that with a supply-frequency fluctuation of 2-3%, the normally nonoperating part of the signal exceeds the useful signal by several times. A frequency-detuning compensation circuit is considered that uses a double T-circuit connected in the feedback circuit of the amplifier (the supply source). The compensation circuit is analyzed, and it is demonstrated that with frequency fluctuations of 2-3%, the nonworking component is drastically reduced. Experimental data corroborating the analysis is submitted. 14 illustrations.

Title : Some problems in designing and calculating the correcting circuits of alternating-current tracking systems (servosystems)

Periodical : Avtom. i. telem., Vol 16, 3-18, Jan-Feb 1955

Abstract : The authors discuss the problems of calculation of correcting circuits in alternating-current tracking systems. They introduce the concept of the equivalent complex transfer function of a linear system operating upon an alternating current. They obtain expressions that determine in accordance with a given transfer function of a linear system the values of the equivalent complex transfer function for the "operating" and "nonoperating" components. The authors consider a number of correcting circuits with alternating current and expound in detail the problem of the operation and calculation of the dual T-shaped circuit. They obtain expressions for the equivalent complex transfer functions of the dual T-shaped circuit, and find the conditions for optimum sensitivity of the circuit; they also give the computational formulas for the circuit and discuss the influence of the deviations of the circuit parameters and carrier frequency upon the operation of the circuit. They study a simple T-shaped circuit and give a comparative evaluation of the simple and dual T-shaped circuits.
